

#	Line	Problem	Fix	Changes
1	47	Main content isn't inside a <main> landmark.	<main>	Identifies the primary content of the page
2	60	First project uses a generic <div>	<article>	Identifies the project as a self-contained piece of content
3	66	Second project uses a generic <div>	<article>	Identifies the project as a self-contained piece of content
4	72	Third project uses a generic <div>	<article>	Identifies the project as a self-contained piece of content
5	54	The About section could be represented with an <article> if treated as a self-contained biography	<article>	Communicates that the biography is an independently meaningful piece of content
6	77	The Skills section could use an <article> for its self-contained content	<article>	Gives the standalone skills content semantic meaning
7	85	Contact information is presented only as paragraphs instead of using an appropriate contact grouping	<address>	<address> semantically identifies contact information for the relevant person or organization
8	87	The Facebook text is written as plain text rather than a link	<a href="..."	Makes contact information an actual navigable link instead of plain text
